

Meet Jason.

Jason, like most of his classmates, has a cell phone. Now that cell phones are allowed at his High school, Jason is bringing and using his phone during the day every day. One of Jason's teachers has been using BYOD in a new way. At the beginning of class, the teacher presents a topic. The teacher then gives several minutes for the students to use their BYOD devices to research that particular topic. The students are asked to come up to several "fast facts" about the topic. The teacher asks the students to take turns sharing their "fast facts" with their peers and then uses those facts to teach the topic and deliver the lesson.
